## Using Medical Marijuana Safely

Many in Florida are using cannabis-containing products for medical purposes. What you might not know is that these products can be dangerous for children. Poison Control Centers are treating small children who've eaten a family member's gummies and become seriously ill. The more concentrated the product and the smaller the child, the greater the danger. If a child gets into your medicine, your Poison Center can help. Calls are free & confidential!

## Secure Your Medications

- Keep medicines out of reach, separate from foods.
- A locked container adds a layer of protection.
- Don't take medicine in front of children.
- Call the Poison Help line if anyone takes the wrong medicine or too much.
- Don't wait for symptoms; the effects of edibles can be delayed.
